

# Umbrella Catalpa

*Catalpa bignoides 'Nana'*

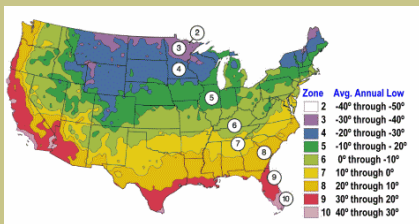

Often called Catalpa bungei.

A small, broad rounded, dense and uniform grafted cultivar grown for its formal topiary-like appearance. This plant will form a tight ball of heart-shaped, rich green foliage in summer. In autumn, the foliage turns a rich, bright yellow and holds for a week on the plant. Often shaped by pruning to be smaller.

Grown on a 5 foot standard.

Mature height is 10-15 feet with a spread of 6-10 feet.

Cold hardy to U.S.D.A. Zone 5.

Since 1944
