

Dawn Redwood

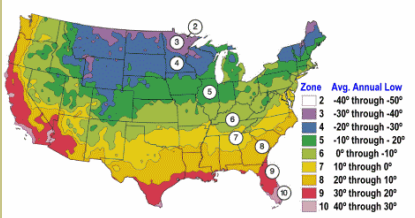

Metasequoia glyptostroboides

Deciduous conifer with soft, delicate, Redwood-like foliage. Has attractive pink new spring growth. Takes sun or part shade. Fast growing. Once established can take wet soils. Reddish-brown fall color.

Thought to be extinct but was discovered growing in remote regions of China in the 1940's. It is a prehistoric plant with leaf samples having been found in fossils.

Mature height is 50-90 feet with a spread of 15-25 feet.

Cold hardy to U.S.D.A. Zone 5.

Clean tree. Drops leaves in the fall like other deciduous trees, not all year round like other conifers.

Since 1944
