

Desirable Pecan

Carya illinoensis sp.

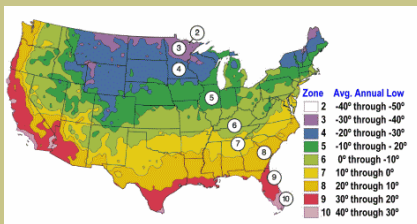

A leading variety in the Southeast. Scab resistant. Medium, soft shell. Very productive and consistent bearer. Not recommended for the arid West.

Self-fertile but will produce more if pollinized with late pollen shedding variety such as Stuart, Mohawk or Kanza.

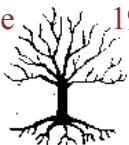

Ripens: Late October to Early November

Mature height is 70-100 feet with a spread of 30 feet. Usually kept lower by commercial pruning.

Cold hardy to U.S.D.A. Zone 7.

Since 1944
